PROFILE

Gameplay programmer at Aeos Games, working across nearly every system in Unleash The Avatar, a soulslike for PlayStation 5 and PC, including the PS5 console port and PC performance. Self-taught in GAS, AI and replication through my own Unreal Engine prototypes.

EXPERIENCE

Gameplay Programmer · Aeos Games — SINCE FEB 2026 · BANGALORE

Unleash The Avatar, a soulslike set in Indian mythology. Unreal Engine 5, C++.

- Combat, abilities and the Gameplay Ability System, with the VFX and audio systems behind them.
- Enemy design, enemy AI and boss encounters.
- Progression, saves, quests, narrative, puzzles and the world systems that tie them together.
- Own the full PlayStation 5 console port and PC performance optimization.

Unreal Engine Developer Intern · Zigoraat Inc. — SEP 2025 TO JAN 2026 · REMOTE (US)

Scanning electron microscope simulator. Unreal Engine 5, C++.

- Built the simulator's core as modular components, plus a tutorial system on polymorphic state machines for multi-step learning flows.
- Structured the UI on MVC so interface logic stays decoupled and event-driven.
- Connected custom hardware controls to the simulator over serial, through Arduino microcontrollers.

AR/VR Intern · Canorous Technologies — OCT 2024 TO NOV 2024 · COIMBATORE

Built event-driven AR/VR modules in Unity and C#, and debugged existing VR projects.

PROJECTS

Modular Mission System · UE5, C++ — GITHUB

- Quest framework on Unreal Subsystems and hierarchical Gameplay Tags (main missions, side quests, sub-steps), authored in Data Assets so designers need no code.
- Linear or non-linear missions started from dialogue, combat or world triggers; a World Event Manager and reward system react on completion.

Top-Down RPG with the Gameplay Ability System · UE5, C++ — CASE STUDY

- Attributes feeding a custom damage pipeline with debuffs, knockback and elemental damage; replicated spells with cooldowns, costs and Gameplay Tags.
- Melee, ranged and summoner enemies on Behavior Trees and EQS; MVC/MVVM HUD, Niagara effects and save/load.

Third Person Shooter · UE5, C++ — CASE STUDY

- Written entirely in C++. Enemies on Behavior Trees and Blackboards patrol, chase, shoot and search where they last saw the player.

SKILLS

Unreal Engine	C++, Blueprints, Gameplay Ability System, replication, Behavior Trees and EQS, Niagara, UMG, Gameplay Tags, Subsystems
Platforms	PlayStation 5 porting, PC performance optimization
Languages	C++, C#, Python
Architecture	Event-driven design, state machines, MVC/MVVM, design patterns
Tools	Git, Visual Studio, Rider

AWARDS

BIT Hacks, Winner · VR maze game — 2023

Smart India Hackathon, Finalist · VR assistive tool for children with ASD and ID — 2024

BRICS, Third Place — 2023

EDUCATION

B.Tech, Computer Science and Business Systems — 2022 TO 2026

Bannari Amman Institute of Technology · CGPA 8.2
