## PROFESSIONAL SUMMARY

Gameplay programmer in Unreal Engine 5 and C++. At Aeos Games I work across nearly every system in Unleash The Avatar, and own its PlayStation 5 console port and PC performance.

## PROFESSIONAL EXPERIENCE

**Gameplay Programmer** Feb 2026 – Present
*Aeos Games, Unleash The Avatar* *Bangalore*

- Build combat, abilities and the Gameplay Ability System, along with the VFX and audio systems behind them.
- Design enemies and build enemy AI and boss encounters.
- Build progression, save, quest, narrative and puzzle systems, and the world systems that connect them.
- Own the full PlayStation 5 console port and PC performance optimization.

**Unreal Engine Developer Intern** Sep 2025 – Jan 2026
*Zigoraat Inc.* *CA, United States (Remote)*

- Built modular systems for a scanning electron microscope simulator in Unreal Engine 5 and C++.
- Wrote a tutorial system on polymorphic state machines to manage multi-step learning flows.
- Structured the UI on the MVC pattern, keeping interface logic decoupled and event-driven.
- Connected custom hardware controls to the simulator over serial, through Arduino microcontrollers.

**AR/VR Intern** Oct 2024 – Nov 2024
*Canorous Technologies* *Coimbatore*

- Built event-driven AR/VR modules in Unity and C#, and debugged existing VR projects.

## PROJECTS

**Modular Mission System** *Unreal Engine 5 | C++*

- Persistent quest framework on Unreal Subsystems and hierarchical Gameplay Tags.
- Data Asset driven, so designers author missions without touching code.
- Linear and non-linear missions triggered by dialogue, combat or the world, with rewards on completion.

**Top-Down RPG with Gameplay Ability System** *Unreal Engine 5 | C++*

- Attributes feeding a custom damage pipeline with debuffs, knockback and elemental damage.
- Replicated spells and abilities with cooldowns, mana costs and Gameplay Tags.
- Melee, ranged and summoner enemies on Behavior Trees and EQS.
- HUD and menus on MVC/MVVM, Niagara VFX with floating combat text, and save/load.

**Third Person Shooter** *Unreal Engine 5 | C++*

- Written entirely in C++, with enemies that patrol, chase, shoot and search for the player.

## SKILLS

- **Unreal Engine:** C++, Blueprints, Gameplay Ability System, multiplayer replication, Behavior Trees, EQS, Niagara, UMG
- **Platforms:** PlayStation 5 porting, PC performance optimization
- **Architecture:** Event-driven systems, state machines, MVC/MVVM, Observer, Factory, modular design
- **Languages and tools:** C++, C#, Python, Git, Visual Studio, Rider

## EDUCATION

**Bachelor of Technology in Computer Science and Business Systems** 2022 – 2026
*Bannari Amman Institute of Technology* CGPA: 8.2

## ACHIEVEMENTS

- **Winner,** BIT Hacks 2023, with a VR maze game
- **Finalist,** Smart India Hackathon 2024, with a VR tool for children with ASD and intellectual disabilities
- **Third place,** BRICS 2023
